

ANALYSIS

Tensioactive ethoxylated co-polymers	22%
Calcium	10%

Application

Rate

Comments

Application	Rate	Comments
Soil	0.25–1 gal/acre	<ul style="list-style-type: none"> › Maintain a 0.03% solution by weight or less if material might come in contact with sensitive plant material › Repeat applications every 30-45 days as required

PRODUCT OVERVIEW

- › High ionization and plant utilization potential
- › Designed to alleviate problems associated with air and water ratios in the soil
- › Improves water penetration speed
- › Increases ideal volumetric soil moisture levels
- › Improves soil structure by delivering water and calcium to soil capillary pore space
- › Generally compatible with other materials

APPLICATION GUIDELINES

- › Proper application rates and frequency should be determined by specific conditions and plant requirements
- › Improved irrigation efficiency is required
- › Always jar test before adding to a spray tank or injection tank
- › Spray applications should be made with sufficient water, 50 mesh screens, and agitation throughout the application
- › Do not spray on highly sensitive plant material at a rate of more than 0.5% by weight
- › When tank mixing with other chemicals it is the responsibility of the end-user to assure compatibility and safety
- › Poly in-line filters should be replaced with stainless steel, if possible
- › Always consult your agronomist

CHEMISTRY

- › 22% ethoxylated co-polymers containing key compounds that assure solubility of carbon content
- › 10% reacted calcium
- › White semi-viscous liquid
